Project APIs Documentation

Authentication APIs

- Register API – Creates a new user account and returns JWT tokens.
- Login API – Authenticates user and returns JWT access and refresh tokens.
- Profile Get API – Fetches logged-in user (or any user) profile details.
- Profile Update API – Updates user profile information.
- Change Password API – Allows logged-in user to change password.
- Request Password OTP API – Sends OTP to user for password reset.
- Verify OTP API – Verifies OTP for password reset.
- Reset Password API – Resets password using verified OTP.
- Logout API – Logs out user by blacklisting refresh token.

Advocate APIs

- Create Advocate Profile API – Allows authenticated advocates to create their professional profile.
- List Advocates API – Retrieves a list of verified advocates with optional specialization filtering.
- Advocate Detail API – Fetches detailed information of a specific verified advocate profile.

Appointment APIs

- Create Appointment API – Allows users to book an appointment with an advocate.
- User Appointments API – Fetches all appointments booked by the logged-in user.
- Advocate Appointments API – Fetches all appointments assigned to the logged-in advocate.
- Update Appointment Status API – Allows advocates to update appointment status.

Case & Document APIs

- Create Case API – Allows advocates to create a new case for a client.
- User Cases API – Fetches all cases for the logged-in client.
- Advocate Cases API – Fetches all cases assigned to the logged-in advocate.
- Case Detail API – Retrieves detailed case information with access control.
- Add Hearing API – Allows advocates to add hearing updates to a case.
- View Hearings API – Fetches all hearings of a case for authorized users.
- Upload Document API – Allows clients or advocates to upload case documents.
- View Documents API – Fetches all documents of a case for authorized users.
- Download Document API – Allows authorized users to download a case document.
